

# Loop management

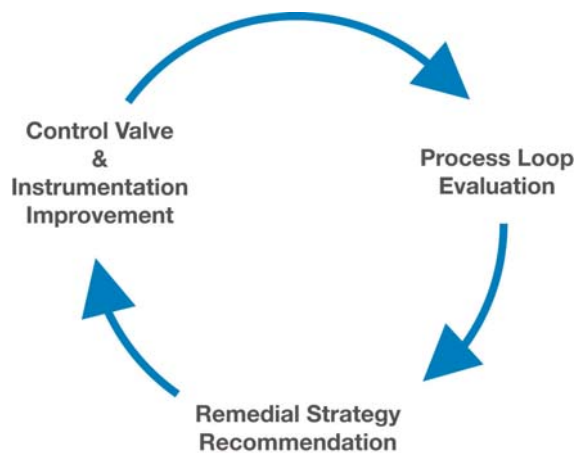

Severn Unival has maintained its strategy for over 20 years.

Working in conjunction with our clients to understand the impact of their control valves on the performance of their business and then using our expertise to improve the operation.

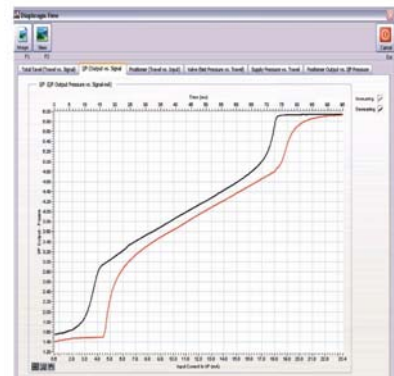

Our success and reputation has been based on this model.

Invensys Performance Services, a business unit of Invensys Foxboro, has a similar mission.

IPS provide a full plant condition diagnostic service, electronically evaluating each process loop for performance, condition and specification. The Invensys service offers the plant manager a clear picture of each loop and recommends a remedial strategy.

Severn Unival & **Invensys Performance Service** have come together to provide a fully integrated service, that delivers a full plant evaluation and the remediation activity for the key control equipment.
