

Essential elements for success

The final decision on the selection of the valve/trim design combination best suited to a specific duty must be based on factual process data and extensive knowledge related to the requirements of the application. Severn's Technical Sales group have extensive knowledge related to choke valve applications and the potential for valve failure situations. The understanding of the operating requirements for the valve is the primary factor in the valve selection process.

Valve development and optimisation is centred on our unique 'Repair Intelligence Circle™' process; a continually evolving aftermarket-derived knowledge base incorporating failure analysis, repair solutions, performance data, and engineering capability for all makes of valves. This unrivalled scope of expertise ensures the development of a core product range that has been refined and proven in the field, offering optimum operational life on the most severe applications.
