

NWC Project

INDUSTRY

Water Utilities

LOCATION

Riyadh City, Saudi Arabia

PROJECT

Replacement of critical water valves in existing pumping stations

THE CHALLENGE

The NWC Project demanded the replacement of existing valves in a water utilities station that as established 35 years ago. This was a high profile project as the new building for the 'Ministry of Water' is also on this station, making it a focal point of interest.

The customer had previously built up a long established relationship with a UK supplier, so Severn Utilities Valves (SUV) had to rise to the challenge of delivering a quality product with excellent service in order to satisfy the requirements of the project as a new supplier.

A further challenge for SUV was working closely with the company who dealt with the installation of the valves and joints, Mechanical World Contracting Division who are an agent of SUV for the Saudi market, ensuring that they also upheld the ethos of delivering excellent customer service.

THE SOLUTION

Due to the ability of SUV to supply the scope of valves required in the necessary timescale and price range the customer was confident using us as an alternative supplier.

To satisfy the requirements of the project there was a range of valves and joints supplied in various sizes:

- ✓ Double Eccentric Butterfly Valves
- ✓ Resilient Seated Gate Valves
- ✓ Double Air Vale, 3 function
- ✓ Dismantling Joints

There were 14 valves and 4 joints supplied in total.

SUV worked very closely with Mechanical World Contracting Division throughout the installation to ensure that the project was completed on time, and the level of quality and customer service that was expected was in fact delivered.

THE OUTCOME

NWC were extremely happy with the products and service delivered, particularly on such a high profile project.

SUV were delighted to have been given the opportunity to support such a project and have established a future relationship with a high profile customer.
