

DATA LOGGING AND TEST AUTOMATION SYSTEMS

FACILITY

Severn Glocon Technologies are able to offer bespoke turnkey testing equipment designed and manufactured in house to support your individual production or qualification requirements to automate and simplify process driven tasks.

Utilising both our in-house expertise in automated system design and high standard of manufacturing, we can deliver a wide variety of pressure testing and monitoring equipment which can be designed to be manually operated, semi-automated or fully automated.

The equipment is specifically designed to aid efficiency and promote safety whilst still maintaining your production needs.

Using test equipment in our production facility on a day to day basis has given our engineers an understanding of the benefits of reliable and efficient test equipment, allowing us to directly relate to the needs of our customers. During initial design and build of the equipment we actively encourage open dialogue with customers, and our engineers can visit you on site to ensure that your exact requirements are fully taken into account.

With both electrical and mechanical engineering disciplines at our disposal, as well as installation, commissioning and training options available we can deliver the complete package best suited for your requirement.

SPECIFIC DETAIL

- ✓ Pressure test equipment
- ✓ Remote monitoring
- ✓ Fluid cleanliness flushing skids
- ✓ Pressure monitoring equipment
- ✓ Data logging with automatic test data downloads
- ✓ Elevated temperature testing equipment
- ✓ Endurance testing equipment
